Double Border

- Installation of automation tools will be more detailed below.
- Double borders are used to give *more visibility* to the text for the viewer.
- It’s only used if:
  - The border color is too light.
    - If it’s **yellow**, always use Double Border.
  - The margin of the subtitles already has text behind it.
  - The margins of the subtitles are noisy and hard to see without it.

This is the settings used for adding double border:

unnamed.png

You can check “save configuration” to save this configuration.

> **Shadow Indention** can be used as a substitute or in addition.
