

# Export Settings

Export in H.264 MP4 at 60fps. Bitrate settings should be Variable Bitrate (VBR) in the range of 24-25 mbps. If you have a weaker PC and rendering at that bitrate takes too long, then you can render draft videos at a lower bitrate for QA review, but if a QA member asks for a higher bitrate version for review, you must provide it or find another editor that can render it for you.

And please, for the love of everything that is holy, **DO NOT EXPORT AS INTERLACED VIDEO**. I will personally hunt you down and strangle you if you do.
